### **DETAILED ACTION**

1. According to a preliminary amendment filed on Nov. 13, 2006, the applicants have canceled claims 11, 12 and 15-22 and furthermore, have amended claims 1, 2, 8-10, 13 and 14. The applicants have also submitted an abstract.

2. Claims 1-10, 13 and 14 are now pending in the application.

#### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 10 recites the limitation "solvate" in claim 1. There is insufficient antecedent basis for this limitation in the claim.

#### ***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 1625

7. Claims 1-10, 13 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pujol ( Eur. J. Med. Chem., cited on applicant's form 1449 ).

Pujol discloses Novel tricyclic spiropiperidines having beta-adrenergic antagonist activity. The compounds 6a, 6f and 6k as well as a process for preparing these compounds ( see page 890 ) disclosed by Pujol are structural homologs of instant compounds when R3 represents  $\text{-NHC(O)R}_{10}$  in the instant compounds of formula (I) since they differ from the instant compounds in having phenyl group substituted at 4<sup>th</sup> position instead of 2<sup>nd</sup> position. However, structural homologs are well known in the art to share the same property. Therefore, it would have been obvious to one skilled in the art to prepare the instant structural homolog compounds with phenyl group substituted at 2<sup>nd</sup> position with  $\text{-NHC(O)R}_{10}$  group without losing their property of beta-adrenergic activity with reasonable expectation of success.
